9	R2						
10	R6						
11			S11	S12		10	13
12	R5						
13	R4						

The grammar is LR(1)
 Since no conflict arises
 in the parse table.

Description:

① DFA:

For each item $[A \rightarrow \alpha \cdot BP, a]$ in I ,
 for each production $B \rightarrow \gamma$,
 for each terminal b in $\text{First}(P\alpha)$,
 add $[B \rightarrow \cdot \gamma, b]$ to set I .

② Parse table:

→ GOTO states found by transitions
 over non-terminal symbols.

→ In Action state:

i) If $[S' \rightarrow S, \$] \in I$, set accept.

ii) If $[A \rightarrow \alpha, a]$, set $R(A \rightarrow \alpha) \forall a$.

iii) shift state.no is given for all
 transitions over terminal symbols.
